

Design Wireframes and User Flows

This document contains the designer-facing MVP wireframes, mockup references, and user flow diagrams for the Anti-Fraud Detector dashboard.

The current repository deliverables are:

- clickable frontend mockup implemented in React;
- static screenshots exported from the implemented MVP;
- low-fidelity wireframes documented below;
- user journey and screen transition diagrams in Mermaid format.

If a `.fig` source file is required for submission, recreate the frames in Figma using these wireframes and screenshots as the source of truth, then export the Figma file from the Figma editor.

Implemented Mockup Screenshots

Screen	Purpose	Screenshot
Dataset Upload / Analysis Status	Upload CSV dataset and track pipeline stages.	01-dataset-upload.png
Suspicious Approvals Dashboard	Review suspicious refund approvals with search, filtering, and risk indicators.	02-suspicious-approvals.png
Refund Investigation Details	Inspect a single refund approval with risk explanations and related approvals.	03-refund-investigation.png
